Presentation

For this I tried to learn more about image styling, border style and also positioning in certain places. I was struggling with form formation where I have no idea where to start.i was also having issue to go to my next slides while clicking multiple times and then I found out it was all because of I forgot to add </div> and unnecessary spaces which can also be read by compiler.i was also struggling to fade in class with my images and text at the same time.it was conflicting with my full screen button and didnt know why.
